Tips & Tricks

Collection of some code snippets

7. Custom title forming - lightbox style

JavaScript

```
function formatTitle(title, currentArray, currentIndex, currentOpts) {
    return '<div id="tip7-title"><span><a href="javascript:;" onclick="$$.fancybox.close();"></a></span>' + (title ? title : '') + '</div>';
}
```

```
$(".tip7").fancybox({
    'showCloseButton'      : false,
    'titlePosition'        : 'inside',
    'titleFormat'          : formatTitle
});
```

CSS

```
#tip7-title { text-align: left; }

#tip7-title b { display: block; margin-right: 80px; }

#tip7-title span { float: right; }
```

Example

6. Start FancyBox on page load

If you have attached FancyBox than you can trigger click method

```
jQuery(document).ready(function() {
    $("#your_selector").trigger('click');
});
```

Alternative method is to use manual call

```
jQuery(document).ready(function() {
    $.fancybox(
        '<h2>Hi!</h2><p>Lorem ipsum dolor sit amet, consectetur adipiscing elit. Etiam quis mi eu elit tempor facilisis id et neque</p>'
        {
            'autoDimensions' : false,
            'width'           : 350,
            'height'          : 'auto',
            'transitionIn'    : 'none',
            'transitionOut'   : 'none'
        }
    );
});
```

5. Display login form [Try now](#)

Sample HTML form:

```
<div style="display:none">
    <form id="login_form" method="post" action="">
        <p id="login_error">Please, enter data</p>
        <p>
            <label for="login_name">Login: </label>
            <input type="text" id="login_name" name="login_name" size="30" />
        </p>
        <p>
            <label for="login_pass">Password: </label>
            <input type="password" id="login_pass" name="login_pass" size="30" />
        </p>
        <p>
            <input type="submit" value="Login" />
        </p>
    </form>
</div>
```

```

        </p>
        <p>
            <em>Leave empty so see resizing</em>
        </p>
    </form>
</div>

```

Attach FancyBox:

```

$("#tip5").fancybox({
    'scrolling'      : 'no',
    'titleShow'      : false,
    'onClosed'       : function() {
        $("#login_error").hide();
    }
});

```

Simple validation; submit data using Ajax and display response

```

$("#login_form").bind("submit", function() {

    if ($("#login_name").val().length < 1 || ($("#login_pass").val().length < 1) {
        $("#login_error").show();
        $.fancybox.resize();
        return false;
    }

    $.fancybox.showActivity();

    $.ajax({
        type      : "POST",
        cache     : false,
        url       : "/data/login.php",
        data      : $(this).serializeArray(),
        success: function(data) {
            $.fancybox(data);
        }
    });

    return false;
});

```

4. Show youtube clips. [Try now](#)

This script also enables full screen mode if video's href has the parameter &fs=1

```

$("#tip4").click(function() {
    $.fancybox({
        'padding'      : 0,
        'autoScale'    : false,
        'transitionIn'  : 'none',
        'transitionOut' : 'none',
        'title'         : this.title,
        'width'         : 680,
        'height'        : 495,
        'href'          : this.href.replace(new RegExp("watch\\?v=", "i"), 'v/'),
        'type'          : 'swf',
        'swf'           : {
            'wmode'      : 'transparent',
            'allowfullscreen' : 'true'
        }
    });

    return false;
});

```

3. Show/hide title on hover. [Try now](#)

```

$("#tip3").fancybox({
    'titlePosition' : 'over',
    'onComplete'    : function() {
        $("#fancybox-wrap").hover(function() {
            $("#fancybox-title").show();
        }, function() {
            $("#fancybox-title").hide();
        });
    }
});

```

2. Select all anchor tags that contain image tags

```

$("a:has(img)").fancybox();

```

Alternative method - apply Fancybox to only those <a> tags that have href attributes that end with .jpg, .png or .gif:

```

$("a[href$=.jpg],a[href$=.png],a[href$=.gif]").fancybox();

```

1. Create gallery from jQuery object collection

```

$("a.fancybox").attr('rel', 'gallery').fancybox();

```
